

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do **NOT** place your solar panel in shaded areas.

Do **NOT** charge behind glass

**PLEASE CHARGE YOUR LIGHT FOR 3 - 5 DAYS BEFORE FIRST USE**

# EDINBURGH

USB SOLAR FESTOON LIGHTS (SET OF 10)

# USER GUIDE

- 1  
Carefully consider solar panel location, try to avoid shadows by day and other sources of light at night that could trick the light into thinking it's still daylight. There's 4m of cable between the panel and the first bulb.
- 2  
Use the spike to install the solar panel in soft ground (water the ground and wait for the ground to soften to avoid damage to the spike or panel)
- 3  
If attaching the solar panel to a wall use the bracket to mark the holes. Drill the holes for the solar panel and fix to the wall. Carefully push the solar panel in place.
- 4  
In either installation situation ensure the cable exits from the bottom of the solar panel and is not under tension when routing it to the first bulb.
- 5  
Connect the solar panel to the light string.

## Operation

After leaving the light to charge for 3 - 5 days use the switch on the underside of the solar panel to switch the lamp on after dark. Each push of the button will select a different brightness. The lower the brightness the longer the light will run for after dark.

## Troubleshooting

If you are encountering problems with your light, its more than likely something you can resolve yourself. A solar panel in a poor location will struggle to work well. Please try the troubleshooting tips below before contacting your retailer.

1. Double check the installation location. Is it as south facing as possible and in an unshaded location?
2. Are there other sources of light tricking the lamp into thinking it's still daylight and stopping the unit from activating? Test this by covering the solar panel with a tea towel or similar - ensuring there is no light reaching the panel. If the lamp activates then another source of light hitting the solar panel is tricking the lamp into thinking it's still daylight. Remove the source of light or install in a different location.

## Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions since this may damage the surfaces and impair operation. Keep the solar panel free of dirt, debris and snow or the battery might not charge properly. This may also shorten battery life or cause malfunction.

## Safety Instructions

The Solar Centre assume no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe the safety instructions. Unauthorised conversion and/or modification of the unit will result in the invalidation of any guarantee.
