

# Bath Solar Wall Lights

## User Guide

Thank you for choosing The Solar Centre's Bath Solar Wall Lights. Please read these instructions carefully before using your light.

**Always take care when setting up your Bath Solar Wall Lights especially when you are situating them in high places.**

### Installing your Bath Solar Wall Lights

Before installing your lights think carefully about how much sun will be able to reach the solar panels in your intended location. South facing walls are always best but look out for trees, buildings, hedges, fencing, etc that may cause shadows throughout the day and reduce the performance of the light in the evening.

1. Remove the screws from the front of the light
2. Remove the angled bracket from the base of the light
3. Screw this into the wall with the screws and rawl plugs provided.
4. Once the angled bracket is securely attached to the wall put the light in place and tighten the screws to the front of the light to hold the light in position.

### Using your Bath Solar Wall Lights

Locate the on / off switch which is situated on the underside of the top of the light and move it to the On position. Once dark the light will operate automatically and run until dawn or until the batteries are empty. The solar panel on the light will charge the batteries the next day for the process to repeat night after night. You can turn the light off at any time with the switch. **Please note the light will not charge with the switch in the off position.**

### Safety Instructions:

The Solar Centre assume no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe the safety instructions.

Unauthorised conversion and/or modification of the unit will result in the invalidation of any guarantee

This device is not a toy and should be kept out of reach of children

Do not expose the device to extreme temperatures (less than -25°C or higher than 50°C) or strong vibration or mechanical stress

Do not leave the packaging material unattended after installation

### Maintenance:

Clean the surface of the solar panels on your Light with a soft, slightly moistened cloth or a dry brush only. Do not use corrosive cleansing agents or chemical solutions since this may damage the housing surface or impair operation. Keep the solar panels on your Light free of dirt, debris and snow, or the battery in your Light will not charge properly. This may also shorten battery life or cause malfunction.
