

Henley Solar Garden Light

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do **NOT** place your solar panel in shaded areas.

Do **NOT** charge behind glass

User Guide

Thank you for choosing The Solar Centre's Henley Solar Garden Light. Please read these instructions carefully before using your light.

Box Contents:

- 1 x Lamp Head with integrated solar panel and batteries
- 2 x stainless steel poles
- 1 x spike

Installation:

Before installing your light think carefully about how much sun will be able to reach the solar panels in your intended location. South facing locations are always best but look out for trees, buildings, hedges, fencing, etc that may cause shadows throughout the day and reduce the performance of the lights in the evening.

1. Please do not attempt to drive the spike into the ground with the pole(s) and lamp head connected. Any damage caused to stake, pole(s) or lamp head as a result of attempting to drive them into hard ground is not covered by your warranty. If the ground is too hard, pour water on the desired area to soften it and make a hole using a strong metal object before driving your spike into that hole.
2. Attach one or both poles to spike, depending on desired lamp height.
3. Attach lamp head to pole and remove protective film from the solar panel.

Operation:

The Henley is designed to maximise run time for lights installed in locations that may get substantial shade throughout the day or for improving runtime when there are many consecutive days of poor weather.

Remove the lamp head from the pole and hold the stainless steel top. Rotate the clear diffuser counter-clockwise to access the three way switch.

Standard Mode

Power Save Mode

Light Off

Standard mode: the light will operate on full brightness after dusk.

Power save mode: substantially increases the runtime of the light whilst slightly reducing the brightness of the light. The light will operate as efficiently as possible however if the panel receives no or little light throughout the day the runtime of the light at night will be reduced, as is the case with all solar products.

If the light fails to operate at night, move the switch to the **off** position and leave it to charge for 3 days before trying to operate it again.
