

LUXSHINE

SOLAR GUTTER LIGHT

USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do NOT place your solar panel in shaded areas.

Do NOT charge behind glass

Thank you for choosing the Luxshine Solar Gutter Light. Please read these instructions carefully before using your light.

Important notes

Always take care when installing your light, especially when mounting it in high places. If you are at all unsure, please contact your retailer or a professional trades person for advice.

Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc, or the shadows that these create. **If the solar panel is installed in a poor location, it may not perform to the best of it's ability.**

1a. Gutter:

- Hook the arm onto the edge of the gutter.
- Insert the thumb screw with a flathead screwdriver, into the hole at the end of the arm. Firmly tighten to fix the unit to the gutter.

1b. Wall:

- Position the flat folded end of the arm on to the wall where you wish to install the unit.
- Insert the long screw with a phillips head screwdriver into the hole opposite the flat end into the wall and fix into place.

2. Insert the arm into the track on the housing of the Luxshine Gutter Light.

Please note the solar panel on the unit should be facing upwards after installation.

3. Insert the smallest screw included with the packaging into the slot under the arm.

4. Peel and remove the protective film off the solar panel.

5. Push the switch located on the unit to ON.

Please note that if the gutter light is to be stored away, push the switch located at the back of the solar panel to OFF. Each solar light has a rechargeable battery pre-installed.

Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel after dark. These could be bright indoor/outdoor lights from your property or neighbours, or streetlights.

If you are unsure, take the light inside and test it in a dark room.

If you are encountering any problems with your Luxshine, often you can resolve this yourself by following our troubleshooting guide. If the light has its solar panel in a poor location it will struggle to work, but that doesn't mean there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please try the troubleshooting tips below before contacting your retailer:

Recharge Procedure

1. Double check the location of your solar panel to ensure it is in a clear location and as South facing as possible.
2. Turn the light off at the switch and leave it to recharge for 3-5 days ensuring one sunny day has passed.
3. After 3-5 days return to the Luxshine and turn it back on at the switch.
4. If your light still does not illuminate after dark, please contact your retailer.

Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions as these may damage surfaces and impair operation. Keep the solar panel free of dirt, debris and snow.

Safety Instructions

The Solar Centre assumes no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorised conversion and/or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C).
