

TAP LIGHT

SOLAR GARDEN LIGHT

USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do NOT place your solar panel in shaded areas.

Do NOT charge behind glass

Thank you for choosing the Tap Light Solar Garden Light. Please read these instructions carefully before using your light.

Always take care when installing your light, if the ground is very hard - sometimes watering the ground a little and allowing it to soak in can make it easier to put the spike in.

Before installing your lights think carefully about how much sun will be able to reach the solar panel in your intended location. South facing locations are always best but look out for trees, buildings, hedges, fencing, etc that may cause shadows throughout the day and reduce the performance of the lights in the evening.

Installation Instructions

1. Remove all packaging and discard.
2. Screw the metal spike into the bottom of the light body.
3. Push the spike into the ground.
4. Place the buckets into the holders on the light fixture.
5. Remove the protective film from the solar panel.

How to use:

Now you have assembled and positioned your lights, you will need to charge it prior to use. Locate the on/off switch which is situated on the underside of the solar panel. Ensure that the switch is turned off and leave the light for 3 days to build up a base charge. On the evening of the 3rd day, turn the light on and wait until dark.

Please repeat this charging process if your light runs low on charge at any time or doesn't appear to be staying on after dark for as long as expected.

Safety Instructions

The Solar Centre assume no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe the safety instructions. Unauthorised conversion and/or modification of the unit will result in the invalidation of any warranty. This device is not a toy and should be kept out of reach of children. Do not expose this device to extreme temperatures (less than -25°C or higher than 50°C) or a strong vibration or mechanical stress. Do not leave the packaging material unattended after installation.

Maintenance

Clean the surface of the solar panel on your light with a soft, slightly moistened cloth or dry brush. Do not use corrosive cleaning agents or chemical solutions since this may damage the housing surface. Keep the solar panel on your light free of dirt, debris and snow or the battery will not charge properly. This may also shorten the battery light or cause malfunction.
