

BANHAM

SOLAR BOLLARD LIGHT

USER GUIDE

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do NOT place your solar panel in shaded areas.

Do NOT charge behind glass

Thank you for choosing the Banham Solar Bollard Light. Please read these instructions carefully before using your light.

Important notes

Always take care when installing your light. If you are at all unsure, please contact your retailer or a professional trades person for advice.

Installation

Remove all packaging and put to one side. Please carefully consider where you wish to install your light before making alterations to your property. It's particularly important that the solar panel receives as much sunlight as possible. Ensure that it is not obstructed by buildings, fences, trees, sheds, etc. or the shadows that these can create. If the solar panel is installed in a poor location, it may not perform to the best of it's ability.

To maximise the battery capacity, the lights should be charged in direct sunlight for 3-5 days before being used for the first time.

The lights will turn ON/OFF automatically when left in the ON position. Please note it is completely normal for the lights to come on at different times as it depends on how fast they charge in their location.

Please note your light will not turn on if it is daylight, to test your light is working take it into a dark room, or cover the panel using an opaque cloth to block out any light.

Assembly

1. Pull out the plastic solar unit from the metal base.
2. Screw the LED bulb into the holder.
3. Press the ON/OFF button once for Standard mode. (Press for a second time to switch to Powersaving mode.)
4. Replace the solar unit back into the casing.
5. Attach the light head to the pole using the screws provided.
6. Attach the entire unit to a flat surface with the ground mount and screws provided (for ground intallation)
7. Insert the spike into the unit, and carefully install into the ground, for lawn installation.

Please note: prior to lawn installation, it is crucial to moisten the ground or loosen the surface in order to increase ease of installation. Applying excessive force can cause damage to the unit.

Troubleshooting

Please ensure that there are no nearby light sources shining on the solar panel after dark. These could be bright indoor/outdoor lights from your property, neighbours, or street lights.

If you are unsure, take the light inside and test it in a dark room.

If you are encountering any problems with your Brampton Bollard Light often you can resolve this yourself by following the troubleshooting guide. If the light has its solar panel in a poor location, it will struggle to work, but this does not mean that there is a fault with the unit. Please remember that the light will arrive with some charge and will likely work for a few days even if the solar panel is poorly located. Please conduct the troubleshooting outlined below before contacting your retailer.

Recharge Procedure

1. Double check the location of your solar panel to ensure it is in a clear location and as South-facing as possible.
2. Turn the light off at the switch and leave it to recharge for 3-5 days ensuring at least one sunny day has passed.
3. After 3-5 days, return the light and turn it back on at the switch.
4. If your light still does not illuminate after dark, please contact your retailer.

Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions as these may damage the surfaces and impair operation. Please keep the solar panel free of dirt, debris, and snow.

Safety Instructions

The Solar Centre assumes no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe these instructions.

Unauthorised conversion and /or modification of the unit may be dangerous and will invalidate your warranty. To avoid damage to sight, do not look directly at the light source. This device is not a toy and should be kept out of reach of children. Do not submerge the device in water or expose it to extreme temperatures (less than -25°C or higher than 50°C.)
